

INNOVATIVE MOBILE DEWATERING SYSTEM

ABCO's innovative Mobile Dewatering Truck incorporates proven dewatering technology for a complete and efficient sludge dewatering system.

Features:

- The system uses a flocculant to provide a high degree of solids/ liquids separation.
- The self contained mobile vacuum system includes a large capacity sectioned tank, high pressure jetting pump, powered suction hose reel, polymer dosing system, heated storage cabinets, and PLC controller.
- Dewatering unit fabricated of stainless steel
- Heavy duty in design and construction with high quality components.
- Designed to North American standards and with consideration for ease of operation and maintenance.
- Operational flexibility suitable for individual septic tanks and municipal systems dewatering, pipe jetting and vacuuming.

Benefits:

- Significantly reduced cost of transporting septic tank waste.
- Reduces the need for long term storage of sludge and septic.
- Reduces risk of regional water contamination by lagoon spillage or leaching.

Manufactured in Lunenburg, NS in ABCO's modern facility under ABCO's strict Quality Assurance Program.
